DECISION INTELLIGENCE

PNP-05 · EXECUTIVE TEAMS · BOARDS · OPERATIONS

AI ADVISORY FOR EXECUTIVES, HUMAN FIRST

The AI Readiness Audit.

Where would AI actually pay off in our organization, and what are the rules? A fixed-fee audit that maps how your organization runs, finds the two or three places AI saves real time or money, and gives your board a plain-language AI policy it can adopt.

2-3
opportunities found, ranked by payoff

10
working days, fixed fee

1
plain-language AI policy for the board

0
jargon. Every page in plain words

WHAT YOU GET

A map of where your time and money go. Workflows, data and team, read in a week of structured interviews and simple exports.

Two or three places AI pays off now. Lead discovery, donor communications, reporting, admin. Ranked by payoff against effort.

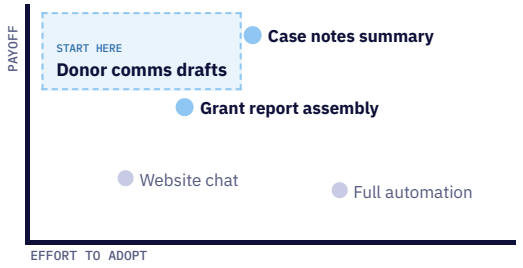

An ethical AI use policy, ready to adopt. What AI may and may not decide, what data stays out, who stays accountable. Board-ready.

A pilot plan, not a transformation. One small, low-risk pilot connected to how you really work, with the checks written down.

Advice from daily practice. We run our own firm on these tools. You are reading the proof.

WHAT THE AUDIT PRODUCES

Your AI opportunities, payoff vs effort

HOW IT WORKS

01
Send a note. The decision you face and the data you hold.

02
A 30-minute call. Frame the question, agree the scope.

03
10 working days. AI explores, people decide, sources shown.

WHO IT IS FOR

Executive teams, boards and operations leads planning their first serious AI steps.

Start before the board asks.

AI questions are reaching every boardroom. **Walk in with a map, a policy and a pilot already running.**

Data → AI explores → **Humans decide.**

B4A DATA & AI STUDIO
DECISION INTELLIGENCE

PNP-05 · EXECUTIVE TEAMS · BOARDS · OPERATIONS

How your data becomes a decision.

You hand over simple exports, nothing more. AI does in hours what would take an analyst weeks: scanning every record, pattern and comparison at once. People then check what matters against the source, and you receive a clear recommendation, not a pile of tables.

Step 01
What we collect
How your organization runs today: structured interviews with your team, your workflow list and simple exports. No system access needed.

Step 02
AI explores at scale
We use AI on your own materials to map the busywork at speed, then test which of your workflows AI handles reliably and which it must not touch.

Step 03
People decide what is true
Every figure that matters is traced back to your records. A person reviews the findings and writes down what the data cannot tell you.

Step 04
You decide with confidence
A priority list, a board-ready policy and one pilot running, so the shift from managing operations to making decisions starts now.

Data becomes information, information becomes knowledge, and knowledge becomes a decision. AI does the sorting at a speed and scale no team can match. People decide what the numbers mean. That split is fixed, and it is why you can trust the result.

Your data stays yours.

No identifiable data leaves your systems. We work from aggregated exports: groups, segments and totals, never individual donors or clients.

Never used to train AI models. Your data is used for your project only, inside tools with training switched off.

Agreed before anything moves. What data is shared, where it is held and who sees it is written down before work begins.

Deleted when you ask. Working copies are removed at the end of the engagement, on request, with confirmation.

Why it matters: the people you serve trusted you with their information. Our method is built so that trust is never put at risk, and your privacy officer can verify every step.

Ethical AI, in writing.

People stay accountable. A named person signs off before anything reaches you or your board.

Numbers come from sources, never from the model. AI explores and compares; it never supplies a figure of its own.

We say where AI was used. In plain words, in every report, and on request at any time.

We say what the data cannot show. Every analysis carries its limits. An average is not anyone's odds.

No harm. No invented numbers or people, and stories about people are told with dignity.

Part of something bigger. The AI Readiness Audit is the rulebook of your Decision Layer: the always-current picture of your organization that the largest enterprises are now building. It decides what AI may do before AI does anything.
